## ONLINE BACKUP

Worried about the security of your back up system? Concerned about the vulnerability of your organisation if your server goes down or disaster happens? Our unique online backup service offers peace of mind for a fixed monthly fee.

---

### What is Online Backup?

Online Backup is a unique service that allows you to back up and restore all data, files and emails held on your network. No more back up tapes. No more tape drives. Just a secure, fast and automated system that guarantees you 24/7 access to the data vital for your organisation.

The Online Backup service automatically encrypts and sends your data over the internet to our secure data centres throughout the day and night. You can retrieve any individual files or restore the entire system, whatever the problem. If your server is down, you can switch to your back up files instantly, allowing all your employees to continue working without interruption. Unlike other back up systems, you can also send and receive new email while you fix your server.

### What does our Online Backup service offer?

For a fixed monthly fee, that could be as low as **£10.00 a month**, our service has a range of benefits that allow your business or organisation to:

- > Securely encrypt and back up all your files, databases and emails to our secure off site servers
- > Back up all your data over the internet throughout the day and night
- > Have instant access to your critical databases and documents, including Microsoft Office, Acrobat and jpg files directly over the internet
- > Option to recover data from other applications such as Sage, MySQL and Oracle as well as being able to access old email and calendar online.
